Summary

Software Engineer at FIS with hands-on experience in load testing using Apache JMeter and analysis using Dynatrace. Familiar with OpenShift and Grafana for monitoring and performance analysis. Also experienced in Angular frontend development and Power BI reporting, with working knowledge of Python and SQL. Looking to apply my performance engineering and troubleshooting experience to Site Reliability Engineering, observability, and service reliability.

Education

SRM Institute of Science and Technology Sep 2021 – May 2025
B.Tech in Computer Science and Engineering *CGPA: 9.18*

IIT Madras BS Degree Programme Dec 2022 – Present
Diploma Level in Programming

Experience

Software Engineer I Jan 2025 – Present
FIS Global Business Solutions Pvt. Ltd. *Chennai, India*

- Planned and executed performance and load tests for multiple banking projects using JMeter, measuring response-time percentiles, throughput and error rates under load.
- Analyzed test runs in Dynatrace using distributed traces and error analysis to isolate slow transactions, failing requests and their likely root causes, and shared findings with project teams.
- Fixed UI defects and delivered frontend enhancements in Angular and TypeScript for an internal performance reporting platform.
- Built a feature for labelling test runs so that users can filter and compare reports based on the labels.

Projects

Placement Portal Application Mar 2026 – Aug 2026
Flask, SQLite, VueJS *IIT Madras BS Degree Programme*

- Built a full-stack campus placement portal (Flask REST API + Vue 3 SPA) with JWT authentication, RBAC and Redis caching.
- Designed a relational schema with SQLAlchemy across 7 models.
- Resolved 20 bugs including an IDOR vulnerability.

Human Activity Recognition using Deep Learning Jan 2025 – Apr 2025
TensorFlow, OpenCV *SRMIST*

- Collaborated in a two-member team to develop a deep learning-based Human Activity Recognition system for classifying human activities from video data, and presented a paper in ICIOT 2025.
- Implemented data preprocessing, feature extraction, model training, and evaluation workflows using TensorFlow, and OpenCV.
- Experimented with LSTM and Temporal Convolutional Network (TCN) architectures to evaluate activity classification performance across multiple human activities.
- Evaluated model performance using standard classification metrics and documented experimental results.

Bundesliga Database Management System Feb 2024 – May 2024
PostgreSQL *SRMIST*

- Designed a normalized PostgreSQL database containing player, team, match, and referee statistics for the Bundesliga 2018–19 season.
- Developed SQL queries to analyze player performance, team statistics, passing metrics, and match outcomes.
- Optimized relational schemas and query execution for efficient analytical reporting and data retrieval.

Conference Presentations

Human Activity Recognition using Deep Learning 2025
Presented at ICIOT 2025

Certifications

Power BI Data Analyst Associate (PL-300) 2026
Microsoft
ServiceNow Certified Application Developer (CAD) 2024
ServiceNow
ServiceNow Certified Systems Administrator (CSA) 2024
ServiceNow

Technical Skills

Programming Languages: Python, Java, JavaScript, TypeScript, C++, C
Frameworks & Libraries: Angular, Flask, Bootstrap, TensorFlow
Databases: PostgreSQL, SQL Server
Data Analytics & Visualization: Power BI, Microsoft Excel
Developer Tools: GitHub, JIRA, Bitbucket, Github Copilot
Observability Tools: OpenShift, Dynatrace, Grafana
